

PHY 1001	Engineering Physics	L,T,P	4
<b>Objective</b> Engineering Physics is a course for the students to <ul style="list-style-type: none"> <li>• learn the basics of physics for engineering</li> <li>• apply them to explore natural phenomenon,</li> <li>• Learn experimentation and contemporary issues.</li> </ul> The course will train the students to understand and investigate the real world scientific phenomena.			
<b>Expected outcome</b> <ul style="list-style-type: none"> <li>• To understand the fundamental laws of physics and apply natural sciences.</li> <li>• To know the concepts and phenomena in the fields of lasers, nano-science, optical fibers and semiconductor.</li> <li>• To improve problem solving skills by conceptual approach</li> <li>• To explore the theories of physics to intuitive concepts.</li> </ul>			
Unit	Topics	Lec	SLO
1	<b>Mechanics</b> Newton's laws, Applying Newton's law, Frames of Reference- inertial frame of reference and non inertial frame of reference, Work and energy, Rigid body dynamics, Torque and Angular momentum, impulse, Fixed axis rotation, Dynamics of fixed axis rotation- Problem solving.	9	a,b,e
2	<b>Quantum Physics:</b> Failure of classical mechanics, Planck's law, Photoelectric effect, Compton effect, de Broglie's hypothesis, Heisenberg's uncertainty principle, Schrodinger's equation, Tunneling effect, Semiconductor, Nano-materials, Carbon nanotubes, Nanotechnology, & its significance, Population inversion, Two, three & four level systems.	9	a,b
3		6	a,b,j
4		8	

	systems, Pumping schemes, Threshold gain coefficient, Components of laser, He-Ne, CO <sub>2</sub> , direct & indirect bandgap semiconductor, semiconducting laser and their engineering applications, Problem solving.		a,b,e
<b>5.</b>	<b>Electromagnetic wave and Optical fibres:</b> Physics of Divergence, Gradient and Curl, Maxwell Equations (Qualitative), EM waves, EM-Wave Equation (Derivation), Poynting theorem, Light propagation through fibers, Acceptance angle, Numerical Aperture, Types of fibers - step index, graded index, single mode & multimode, Attenuation, Dispersion-intermodal and intramodal. Laser diode(source), PIN diode(photo detector), Applications of fiber optics in industry- Endoscopy, Problem solving.	9	a,b,d ,e
<b>7</b>	<b>Contemporary Topics &amp; Guest Lectures</b>	2	j,k
	<b>Total Lectures</b>	43	
<b>Text Books</b>			
<b>1</b>	Classical Mechanics, Herbert Goldstein, 3 <sup>rd</sup> Edition, Addison- Wesley, (2002).		
<b>2</b>	Mechanics, Keith R. Symon, 3 <sup>rd</sup> Edition, Addison- Wesley, (1971)		
<b>3</b>	Concepts of Modern Physics, Arthur Beiser et al., Sixth Edition, Tata McGraw Hill (2013).		
<b>4</b>	Laser Fundamentals, William T. Silfvast, Cambridge University Press (2008).		
<b>5</b>	Introduction to Electrodynamics, D. J. Griffith, 3 <sup>rd</sup> Edition (2013).		
<b>6</b>	Fiber Optic Communication Technology, Djafar K. Mynbaev and Lowell L.Scheiner, Pearson (2011)		
<b>Reference Books</b>			
<b>1</b>	Modern Physics, Raymond A. Serway, Clement J. Mosses, Curt A. Moyer, Cengage learning [ 3 <sup>rd</sup> Indian Edition], 2010		
<b>2</b>	Modern Physics, Kenneth Krane, Wiley Indian Edition, 2010		
<b>3</b>	Laser Systems and Applications, Nityanand Choudhary and Richa Verma, PHI Learning Private Ltd., 2011		
<b>4</b>	Fundamental Physics, Halliday – Resnick, 8 <sup>th</sup> Edition, Wiley (2009)		
<b>5</b>	Nano: The Essentials, T. Pradeep, McGraw Hill (2008)		
<b>Indicative list of experiments</b>			
	<ol style="list-style-type: none"> <li>1. Experimental verification of Newton's second law</li> <li>2. Determination of Plank's constant using LED's</li> <li>3. Experimental verification of Heisenberg's Uncertainty principle.</li> <li>4. Measuring numerical aperture of an optical fibre</li> <li>5. Measure the distance between tracks of CD/DVD</li> <li>6. Measurement of wavelength of He-Ne Laser by using grating.</li> <li>7. Particle size determination.</li> <li>8. Band gap determination</li> </ol>		

	9. Photo electric effect 10. Black Body radiation	
Recommendation by the board of studies		5/5/17
